

N&N Paddlemixer MIX-300

N&N Nadratowski's MIX-Series Paddle Mixers are the most universal type of mixers on the market, capable of mixing most types of products gently, effectively and quickly.

The left configuration type B is available directly from stock. (See images for reference)

The mixing process consists of two interlocking paddle shafts. Mixing is done by turning both shafts in opposite directions, anti-clockwise or clockwise, at the same preset speed.

The large ejection valve at the bottom of the mixing bowl and minimal space between the paddles and the bowl (3 mm) ensure a very short ejection time.

The MIX-300 from N&N

1. Equipped with clear button controls
2. Equipped with NORD brand motors

Are you looking for the right solution within your production process?
The Havantec specialists will gladly think along with you!
